

intalk.io

Bot AI

**Human-Like Conversations.
Enterprise-Grade Intelligence.**

Seamlessly blending Telephony, Speech Recognition, LLMs, and TTS to deliver real-time, scalable, and natural customer experiences.

In today's customer-first world, speed and personalization matter. **The intalk.io Bot AI enables real-time, natural, and contextual voice conversations** powered by **Telephony + AI + Speech technologies**.

It empowers enterprises to deliver **24/7 support, scale conversations, and reduce agent workload** - all while keeping the human touch intact.

Key Capabilities

Telephony Integration

SIP, WebRTC, PSTN, inbound & outbound call handling

Voice Cut-Through

Users can interrupt bots mid-speech for faster, natural interactions.

Smart TTS, ASR & Playback

Natural voices, instant playback, and live transcription — all in one.

Conversational AI Engine

LLM-powered context-aware conversations

Voice Cloning

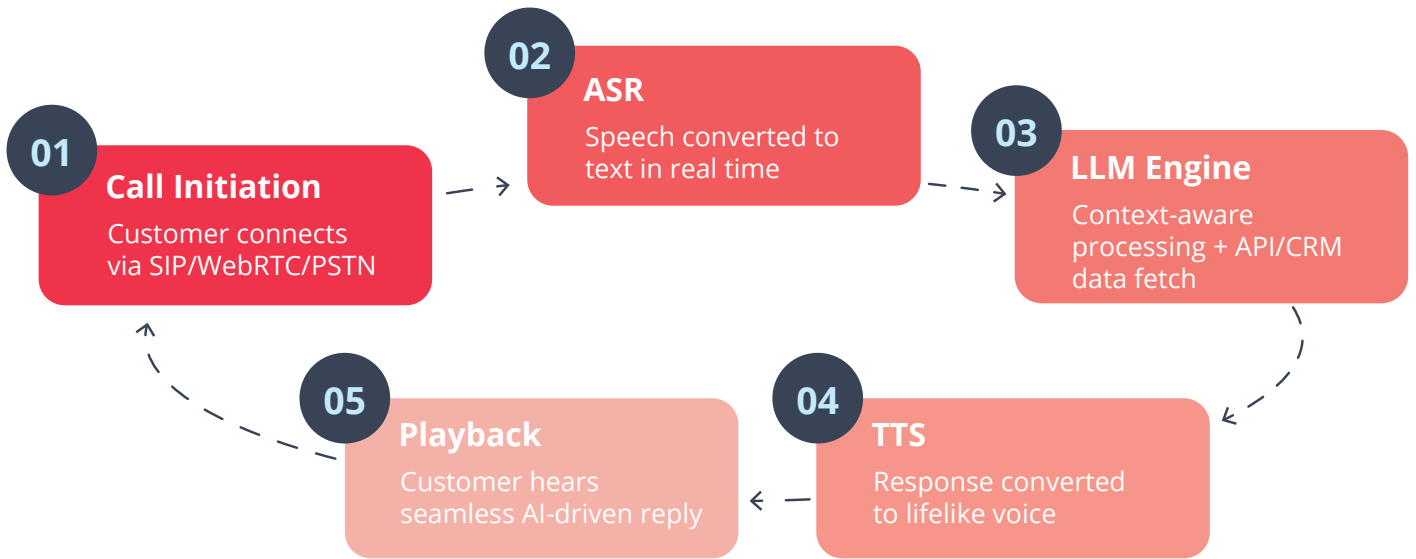

AI voice replicas to make bots speak in a person's voice.

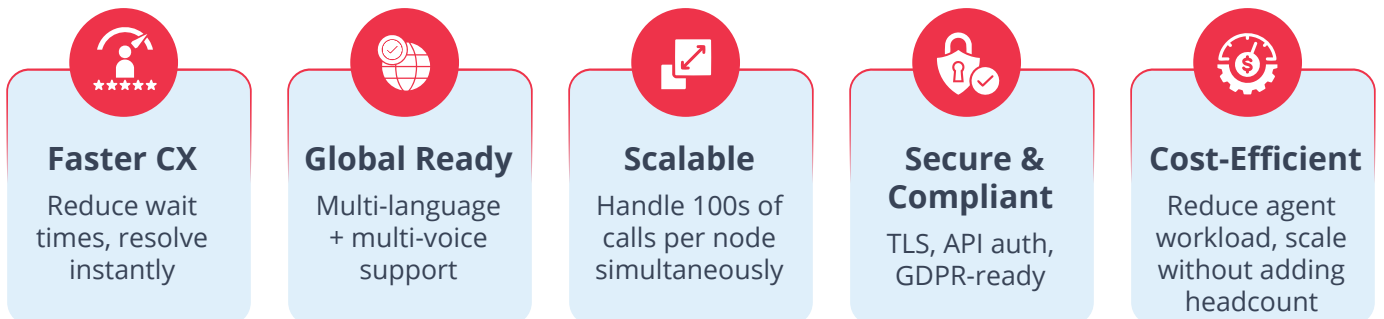

Multi-Language Support

Dynamic switching mid-call for global CX
